SIGNICAT

⏻ Connect

Safe and secure access to business applications

Signicat Connect enables businesses to offer easy-to-use and secure access to sites and applications. Choose from a wide range of authentication methods including public eIDs and social media, all easily available through a single integration. Signicat helps customers save time and money by allowing them to spend less resources on authentication and digital identity and more time on their core business. Businesses integrated with Signicat get access to the largest eID-hub in Europe in addition to authentication ecosystems for handling simple and strong authentication. The flexibility and the range of authentication methods delivered by Signicat allows you to tailor the security of your authentication processes to your business needs, balancing between user experience and risk.

Signicat Connect offers three types of identities:

▪ eID providers such as BankID in Norway and Sweden, iDIN in the Netherlands and Tupas in Finland.

▪ Signicat ID, an ecosystem for handling username, password, fingerprint authentication and two-step verification such as SMS and other generated one time passwords.

▪ Consumer identities such as Facebook and LinkedIn.

For organizations

▪ A single interface to multiple eID providers in different countries

▪ A wide range of eID-methods, including public eIDs and social media

▪ Simple and easy-to-use API

▪ A full eco-system for handling username, password and a variety of two-step verification methods

▪ Signicat does maintainance, improvements and updates of the identity methods

For end users

▪ Sign in with familiar eID methods

▪ Two-step verification which protect your account and information

▪ Convenient authentication using fingerprint from the mobile phone

Strong customer authentication (SCA) using a mobile device

Supports more than 20 eID methods and consumer identities

ⓘ With PSD2 (EU Payment Service Directive 2) being implemented, your organization will have to use Strong Customer Authentication (SCA) when dealing with payment transactions.

Signicat is one of the leading providers of electronic identity and electronic signature solutions in Europe. The company, founded in 2007, delivers online trust based services to the public and private sector globally. The solutions are used by banks and financial institutions, insurance companies, government agencies and large corporations as well as small and medium sized businesses.

Signicat specializes in cross-border cloud based electronic identity services and electronic signatures. The company has local presence in Norway, Sweden, Denmark, Finland, the Netherlands and UK. These countries are in the forefront in the world with the usage of digital identities and electronic signatures.
